# SWINGABLE OVERHANG

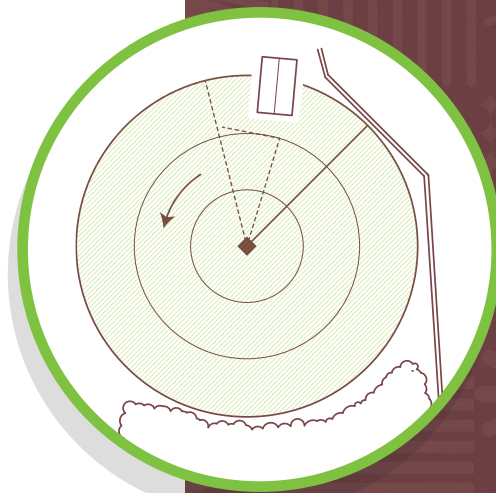

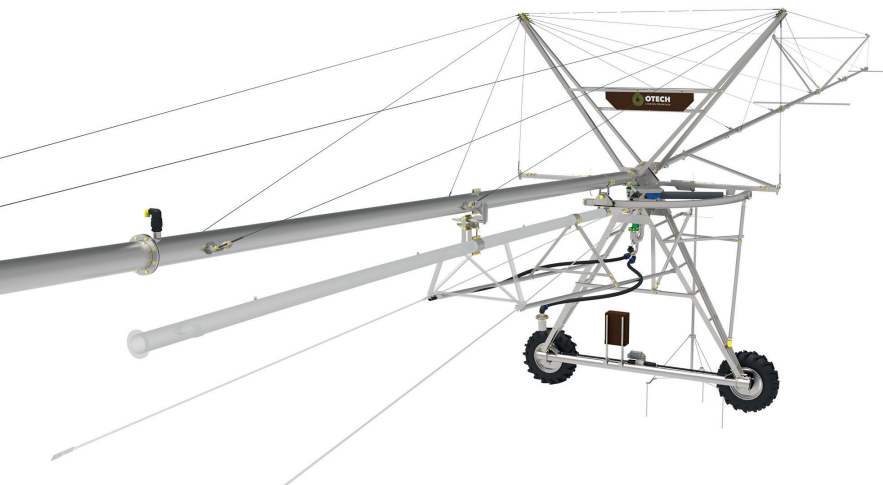

**OTECH**  
LEADING IRRIGATION

 **A FARMFRONT COMPANY**

Working at the Farmfront of Irrigation

[www.farmfront.com](http://www.farmfront.com)

## Swingable overhang

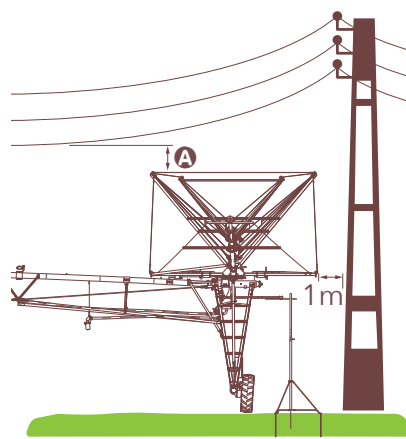

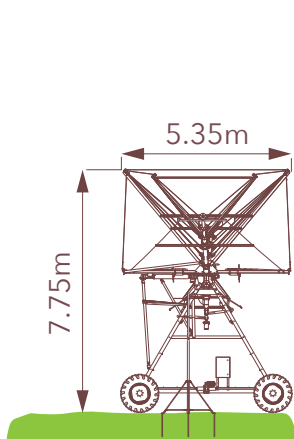

The Swingable overhang made by OTECH can increase the irrigated area of a pivot or a ramp avoiding obstacles automatically.

When approaching the obstacle, an electric jack allows the 24-metre (or 30-metre) overhang to fold back 87° counterclockwise.

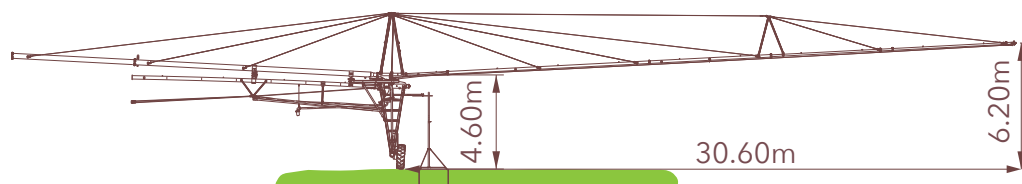

Sprinklers and the gun located on the overhang were arrested while the rest of the unit continues to irrigate the area of the obstacle.

In some cases, an extra gun can be mounted on the tower to gain some irrigated surface.

## Overall dimensions in folded and unfolded positions

In the case of a run under a powerline, contact the energy supplier to determine the minimum distance **A** acceptable from the cables.
