ENHANCING IRRIGATED SURFACE AT LOWER COST

The **Otech** folding span system allows to increase the irrigated area around obstacles. It can be positioned on any tower of the pivot.

The alignment of the spans is provided by magnetic sensors.

The system is fully automated and sprinkler package is designed for uniform watering in the folded and deployed modes.

The tower is equipped with a big bearing around a hydraulic swivel joint, it ensures a smooth rotation while ensuring tightness.

Rotation 0° to 170°

The **OTECH** folding tower allows a maximum angle of 170°.

Its design makes the model with the highest fold angle in competition.

Option available in ST127
and ST168 with folds
in both directions
